

CSE 1224: Lab 3 - Due Tuesday, September 27 by 11:59 pm

1) Write a function called *neg_mul_5(li)* that takes a list of integers *li* as an argument and returns a new list that contains the negative multiples of 5 in *li*. Your function should use a for-loop.

For example, if

```
li = [-10, 2, -5, -8, 16, 10, -2, -15]
```

The function should return

```
[-10, -5, -15]
```

Hint: Start with

```
result = []
```

2) Solve the problem from question 1 using a while-loop.
